To Whom It May Concern:

Matahiwi Estate in Paierau Road, Masterton is an architecturally designed winery constructed in 2004. This process was project managed by Cedco Ltd. The winery is able to process currently approximately 800 tonne of red and white grapes, with capacity to grow the winery to process between 1000 and 1500 tonne of grapes in the future.

Scott Roberts was heavily involved in the design and construction of the winery, liaising directly with the Owner and Winemaker throughout the process. This included aspects of construction, electrical, drainage, all winery machinery and refrigeration.

We have found Scott to be an excellent person to deal with, both in a professional technical manner, as well as being efficient and amenable. His knowledge and grasp of all aspects of the project, as well as wine-specific areas was very good and we have always found him open to solving any issues that arose through the process and after construction has been completed.

We have no hesitation in recommending him for similar projects.

Kind regards,

Jane Cooper
